Languages: English (Fluent), Swedish (C-level – currently learning), Malayalam (Native)

EXPERIENCE

GattyInstruments AB, Uppsala, Sweden

Fullstack developer

December 2024 – May 2025

- GattyInstruments AB is a Swedish R&D company based in Uppsala, specializing in medical technology, particularly mobile respiratory analyzers used by healthcare professionals and individuals focused on respiratory health.
- The company needed a robust and user-friendly digital interface for their respiratory analyzer product, specifically a doctor's dashboard that could securely and efficiently manage clinical data while also meeting important usability and certification requirements.
- As a fullstack developer, I developed and integrated core features for the doctor's dashboard using React.js, Tailwind CSS, and TypeScript for a modern, responsive UI. On the backend, I built scalable REST APIs and managed data using Node.js and MySQL. To ensure code quality and reliability, I wrote unit tests with Jest, contributing to a production-ready system that supported the product's timely certification and launch.

IBS Software Trivandrum, India

Lead Solution Engineer

December 2021 - August 2024

- IBS Software is a global SaaS provider delivering mission-critical, enterprise-scale platforms for travel, transportation, and logistics industries, with a strong focus on digital transformation.
- The company required scalable, maintainable, and high-performance web applications to support complex, enterprise-level workflows across multiple teams and business functions. This included delivering customized solutions for various clients such as flydubai and CASS.
- I was responsible for driving the frontend architecture and feature delivery of enterprise-grade web applications for flydubai and CASS. I led the design and implementation of solutions using Angular 13+, TypeScript, HTML5, and Angular Material, ensuring alignment with technical, product, and business requirements. I worked within a micro-frontend architecture supported by an Nx-managed monorepo, enabling modular, scalable development across teams. I collaborated closely with cross-functional stakeholders to align technical solutions with business goals and ensure seamless delivery. These efforts improved development efficiency, reduced time-to-market, and delivered robust, maintainable systems for large enterprise clients like flydubai and CASS.

Kameda Infologics, Trivandrum, India

Senior Software Engineer

February 2021- December 2021

- Kameda is a leading provider of innovative Healthcare IT solutions, delivering scalable, efficient, and patient-centric systems to hospitals and clinics. Its main products, RIS and YASASII, are designed to streamline clinical workflows, enhance patient outcomes, and support healthcare providers across all levels of care.
- At the time, Kameda Infologics required an upgrade of the YASASII healthcare application to ensure better performance, long-term maintainability, and compatibility with modern web standards. I was responsible for migrating the YASASII application from Angular 9 to Angular 11, ensuring a smooth transition with minimal disruption to functionality.
- I was responsible for migrating the application from Angular 9 to Angular 11, ensuring a smooth transition with minimal functional impact. I led a team of four UI developers, conducted code reviews, and provided technical mentoring to maintain code quality and best practices. Working within a monorepo architecture, I developed responsive, user-friendly interfaces using Angular, Bootstrap, SCSS, and TypeScript, contributing to faster delivery, early client launches, and a maintainable frontend architecture.

UST Global, Trivandrum, India

Software Engineer

October 2018- January 2021

- UST Global is a leading digital technology services company, providing solutions across industries like healthcare, finance, and retail, focusing on digital strategy and software engineering. The company leverages emerging technologies such as AI and automation to improve efficiency and customer experiences.
- A critical project was undertaken with a leading banking client to modernize legacy systems and improve application performance.
- As a frontend developer, I migrated applications from Angular 6 to Angular 11, applying performance optimization techniques and modern best practices. I developed responsive UI components using Angular, Bootstrap, CSS3, and JavaScript, and collaborated closely with backend developers on REST API integration. I also contributed to an MVP project, integrating D3.js visualizations, delivering a beta release within two months, and supporting rapid product validation and positive client feedback., which led to additional project opportunities and an extended partnership.

Neoito Technologies Pvt Ltd, Trivandrum, India

Software Engineer

June 2017- June 2018

- NeoITO is a fast-growing product engineering company that specializes in building full-stack, scalable web and mobile applications for startups and enterprises. With expertise in cutting-edge technologies, NeoITO delivers scalable and innovative solutions that empower businesses to accelerate growth and stay competitive. Its client portfolio includes companies from healthcare, logistics, eCommerce, and SaaS industries.
- The company had two critical projects: Databot.io, a Business Intelligence platform empowering data-driven decisions, and PropertyOK, a real estate marketplace undergoing major performance and user experience enhancements.
- I contributed to building scalable, responsive user interfaces using Angular and Material Design, and worked on PropertyOK using an Angular + Redux architecture to improve application performance and responsiveness. As a startup, Databot.io was a key project for NeoITO that helped drive new business opportunities and establish a strong market presence.

EDUCATION

Uppsala University –Uppsala, Sweden

Master in Information Systems

Present
